

## CONTENTS

|   |      |
|---|------|
| <b>Preface</b>  | xix  |
| <b>Common Abbreviations</b>   | xxii |
| <b>Glossary</b>   | vvxi |
| <b>Section I: Fundamentals</b>  |      |
| <b>1. Thermodynamics for molecular biology</b>                                | 1    |
| 1.1. Equilibrium constants  | 1    |
| 1.2. Gibbs free energy  | 3    |
| 1.2.A. Coupled reactions  | 5    |
| 1.2.B. Linked functions   | 6    |
| 1.3. Enthalpy   | 7    |
| 1.4. Entropy  | 9    |
| 1.5. Heat capacity  | 11   |
| 1.6. Calorimetry  | 13   |
| 1.6.A. Isothermal titration calorimetry                                       | 14   |
| 1.6.B. Differential scanning calorimetry                                      | 16   |
| <b>2. Noncovalent interactions between atoms and molecules</b>                | 18   |
| 2.1. Short-range repulsions: defining atomic volume                           | 18   |
| 2.1.A. Molecular surfaces and volumes   | 20   |
| 2.1.B. Packing density  | 21   |
| 2.2. Electrostatic forces: simplicity to complexity                           | 22   |
| 2.2.A. Point charges: the simplest interaction                                | 22   |
| 2.2.B. Dipoles: charge separation within a molecule                           | 23   |
| 1. Dipole moment  | 25   |
| 2. Polarizability   | 26   |
| 2.2.C. Ion pairs and salt bridges   | 26   |
| 2.3. Van der Waals interactions: the advantages of close packing              | 27   |
| 2.4. Hydrogen bonds: specificity and directionality                           | 29   |
| 2.5. Intramolecular interactions: the importance of entropy                   | 32   |
| 2.5.A. Effective concentrations: an empirical approach to the entropy problem | 33   |

|   |           |
|---|-----------|
| 2.5.B. Multiple interactions: entropy and cooperativity                         | 36        |
| 2.5.C. Cooperativity of multiple interactions: the key to macromolecule folding | 37        |
| <b>3. Aqueous solutions</b>   | <b>42</b> |
| 3.1. Liquid water   | 43        |
| 3.1.A. Liquids: close interactions without order                                | 43        |
| 3.1.B. Water: the importance of hydrogen bonding                                | 45        |
| 3.2. The hydrophobic interaction: avoiding water's phobia                       | 49        |
| 3.2.A. Partition coefficients: measuring preferences for different environments | 50        |
| 3.2.B. The hydrophobic interaction in nonpolar model systems                    | 51        |
| 3.3. Membranes: hydrophobic bilayers in an aqueous environment                  | 58        |
| 3.3.A. Detergents   | 65        |
| 3.4. Ionization   | 67        |
| 3.4.A. Measuring the pH   | 71        |
| 3.4.B. Buffers  | 72        |
| 1. Phosphate buffers  | 74        |
| 2. Tris buffer  | 75        |
| 3. Membrane-impermeable Good buffers  | 76        |
| 4. Volatile buffers   | 76        |
| 3.5. Salts and ions   | 77        |
| 3.6. Electrostatic interactions in water: Debye and Hückel                      | 79        |
| 3.6.A. Poisson and Boltzmann  | 80        |
| 3.7. Solubilities in water  | 80        |
| 3.7.A. Salting in, salting out  | 81        |
| 3.8. Hofmeister series  | 83        |
| 3.9. Hydration of macromolecules  | 84        |
| 3.9.A. Preferential hydration <i>versus</i> preferential binding                | 85        |
| 3.9.B. Transfer free energy   | 88        |
| 3.10. Chemical potential  | 88        |
| 3.11. Compressibility: the effects of high pressure                             | 89        |
| <b>4. Kinetics: a brief review</b>  | <b>91</b> |
| 4.1. Single reactions   | 91        |
| 4.1.A. First-order kinetics   | 93        |
| 1. Half-time  | 95        |
| 2. Relaxation time  | 96        |
| 3. Reversible reactions   | 96        |
| 4.1.B. Second-order kinetics  | 97        |
| 4.1.C. Zero-order kinetics  | 99        |
| 4.1.D. Transition state   | 99        |
| 4.1.E. Free-energy relationships  | 104       |

---

|           |  |            |
|-----------|--|------------|
| 4.2.      | Multi-step reactions and intermediates           | 105        |
| 4.2.A.    | Rate-determining step                            | 107        |
| 4.2.B.    | Steady-state kinetics                            | 110        |
| 4.3.      | Measuring rapid reactions                        | 110        |
| 4.3.A.    | Rapid mixing techniques                          | 111        |
| 4.3.B.    | Relaxation techniques                            | 113        |
| <b>5.</b> | <b>Isotopes and radioactivity</b>                | <b>115</b> |
| 5.1.      | Isotopes   | 115        |
| 5.2.      | Radioactive decay                                | 116        |
| 5.2.A.    | Alpha particles                                  | 118        |
| 5.2.B.    | Beta particles                                   | 119        |
| 5.2.C.    | Positrons  | 120        |
| 5.2.D.    | Gamma rays                                       | 120        |
| 5.3.      | Kinetics of radioactive decay                    | 120        |
| 5.3.A.    | Units  | 121        |
| 5.4.      | Measurement of radioactivity                     | 121        |
| 5.4.A.    | Radiation counters                               | 121        |
|           | 1. Ionization monitor                            | 122        |
|           | 2. Scintillation counters                        | 122        |
|           | 3. Cerenkov radiation                            | 123        |
| 5.4.B.    | Autoradiography                                  | 123        |
|           | 1. Film-less autoradiography                     | 124        |
|           | 2. Fluorography                                  | 125        |
| 5.5.      | Radioisotopes commonly used in molecular biology | 125        |
| 5.5.A.    | Hydrogen isotopes                                | 125        |
|           | 1. Tritium                                       | 125        |
|           | 2. Deuterium                                     | 127        |
| 5.5.B.    | Carbon isotopes                                  | 127        |
| 5.5.C.    | Phosphorous isotopes                             | 128        |
| 5.5.D.    | Sulfur isotopes                                  | 128        |
| 5.5.E.    | Iodine isotopes                                  | 129        |
| 5.6.      | Kinetic isotope effects                          | 129        |
| 5.7.      | Isotope (hydrogen) exchange                      | 130        |
| 5.7.A.    | Mechanisms of exchange in model molecules        | 131        |
| 5.7.B.    | Monitoring exchange                              | 135        |
|           | 1. NMR   | 135        |
|           | 2. Mass spectrometry                             | 136        |
|           | 3. Neutron diffraction                           | 137        |
| 5.7.C.    | Exchange in macromolecules                       | 137        |
|           | 1. Solvent penetration model                     | 137        |
|           | 2. Local unfolding mechanism                     | 138        |
|           | a. EX1 mechanism                                 | 138        |
|           | b. EX2 mechanism                                 | 139        |

|   |     |
|---|-----|
| <b>6. Mass spectrometry</b>   | 140 |
| 6.1 Electrospray ionization (ESI)   | 142 |
| 6.2 Matrix-assisted laser desorption/ionization (MALDI)                   | 144 |
| 6.3. Mass Analyzers   | 146 |
| 6.3.A. Magnetic focusing  | 146 |
| 6.3.B. Quadrupole mass analyzers  | 146 |
| 6.3.C. Time-of-flight analyzers)  | 147 |
| 6.3.D. Fourier-transform ion cyclotron resonance (FTMS)                   | 148 |
| 6.4. Tandem Mass Spectrometry ( $MS^n$ )                                  | 148 |
| <br>  |     |
| <b>Section II: Visualizing macromolecules</b>                             |     |
| <br>  |     |
| <b>7. Scattering of radiation by molecules</b>                            | 150 |
| 7.1. Static light scattering  | 152 |
| 7.1.A. Measuring the size of a macromolecule                              | 152 |
| 7.1.B. Diffraction effects from the internal structure of a particle      | 154 |
| 7.1.C. The radius of gyration   | 156 |
| 7.2. X-ray scattering   | 158 |
| 7.2.A. Small-angle scattering   | 161 |
| 1. Fourier transforms and the vector length distribution function, $P(r)$ | 162 |
| 2. Determining the radius of gyration from small-angle scattering data    | 164 |
| 7.2.B. Interactions between particles                                     | 166 |
| 7.2.C. Experimental apparatus   | 167 |
| 7.2.D. X-ray sources and detectors  | 168 |
| 7.3. Neutron scattering   | 169 |
| 7.3.A. Interactions of neutrons with atoms                                | 169 |
| 7.3.B. Contrast variation   | 170 |
| 7.3.C. Contrast variation and small-angle scattering                      | 171 |
| 7.3.D. Production and detection of neutrons                               | 172 |
| <br>  |     |
| <b>8. Microscopy and scanning probes</b>                                  | 174 |
| 8.1. Basic principles of microscopy                                       | 175 |
| 8.2. Light microscopy   | 177 |
| 8.2.A. Transmission light microscopy                                      | 177 |
| 1. Bright-field microscopy  | 177 |
| 2. Dark-field microscopy  | 177 |
| 3. Phase-contrast microscopy  | 178 |
| 4. Polarization microscopy: birefringent objects                          | 179 |
| 5. Differential interference-contrast (DIC) microscopy                    | 179 |
| 8.2.B. Fluorescence microscopy  | 180 |
| 1. Immunofluorescence microscopy  | 181 |
| 8.2.C. Confocal microscopy  | 182 |
| 8.2.D. Near-field scanning optical microscopy (NSOM)                      | 184 |

---

|           |   |            |
|-----------|---|------------|
| 8.3.      | Electron microscopy                               | 185        |
| 8.3.A.    | Transmission electron microscopy (TEM)            | 186        |
| 8.3.B.    | Negative stain                                    | 187        |
|           | 1. Rotary shadowing (shadowcasting)               | 189        |
| 8.3.C.    | Cryoelectron microscopy                           | 189        |
| 8.3.D.    | Scanning electron microscopy (SEM)                | 191        |
|           | 1. Environmental scanning electron microscope     | 193        |
| 8.3.E.    | Scanning transmission electron microscopy (STEM)  | 193        |
| 8.3.F.    | Immunoelectron microscopy                         | 195        |
| 8.3.G.    | Freeze-fracture microscopy                        | 195        |
| 8.4.      | Reconstructing 3-D structures from 2-D microscopy | 196        |
| 8.4.A.    | Single-particle reconstruction                    | 196        |
| 8.4.B.    | Electron tomography                               | 197        |
| 8.5.      | Scanning probes                                   | 198        |
| 8.5.A.    | Scanning tunneling microscopy                     | 199        |
| 8.5.B.    | Atomic force microscopy                           | 201        |
|           | 1. Principles                                     | 202        |
|           | 2. Imaging methods                                | 203        |
|           | 3. The sample                                     | 204        |
|           | 4. Forces detected                                | 205        |
|           | 5. Resolution                                     | 205        |
| 8.5.C.    | Magnetic force microscopy                         | 206        |
| 8.6.      | Manipulating individual molecules                 | 207        |
| <b>9.</b> | <b>Crystallography</b>                            | <b>210</b> |
| 9.1.      | Crystallization of macromolecules                 | 211        |
| 9.1.A.    | Precipitation of macromolecules                   | 213        |
|           | 1. Sulfate salts                                  | 213        |
|           | 2. 2-Methyl-2,4-pentandiol (MPD)                  | 214        |
|           | 3. PEG (polyethylene glycol)                      | 215        |
| 9.1.B.    | Vapor-phase crystallization                       | 215        |
| 9.2.      | X-ray crystallography                             | 216        |
| 9.2.A.    | Crystallography in pictures: optical transforms   | 219        |
| 9.2.B.    | Bragg angle: reflecting X-rays                    | 221        |
| 9.2.C.    | Reciprocal space                                  | 222        |
| 9.2.D.    | Precession photograph: revealing reciprocal space | 223        |
| 9.2.E.    | Measuring the structure factors                   | 223        |
| 9.2.F.    | Temperature factor: smearing the electron density | 224        |
|           | 1. Wilson plot                                    | 225        |
| 9.2.G.    | Cryocrystallography: preservation by freezing     | 226        |
| 9.3.      | Determining the phases                            | 227        |
| 9.3.A.    | Direct methods: phases from amplitudes            | 227        |
| 9.3.B.    | Isomorphous replacement: heavy atoms              | 228        |
| 9.3.C.    | Molecular replacement: an approximate solution    | 231        |
